

### Movable wall with semi-automated operation (sealing automatism)

#### In addition to the elements:

- Sealing automatism:** The sealing automatism can be integrated in all elements.  
Here, the upper and lower sealing bars as well as the lateral sealing of the element are extended and retracted via individual motors and spindles.
- Signal transmission:** The transmission of control signals in the elements is performed by a contact unit which is embedded in the side of the profile.

#### Dimensions

Width wall connection :	50 mm
Width locking bar::	80 mm
